

Nguyen Quoc Thai

Hoai Duc, Hanoi | 0336606263 | quocthaitpth@gmail.com | github.com/Quocthait23

Software Developer

Highly motivated Developer specializing in Full-stack, Web3, and Applied AI technologies. Hands-on experience developing diverse projects, from hybrid e-commerce platforms and secure smart contracts to practical machine learning solutions. My AI expertise includes building malicious URL detection systems, salary prediction models, and efficient Edge AI applications optimized for seamless in-browser execution. I prioritize logical architecture and robust code to deliver high-quality, scalable applications. With a proactive mindset and a strong sense of responsibility, I am ready to tackle complex technical challenges in a fast-paced environment.

WORK EXPERIENCE

C'Lab Technology

01/2026 - 05/2026

Front End Developer

- Engineered user-centric landing pages and robust front-end architectures for a high-performance forex exchange platform.
- Managed complex application state to accurately calculate and render real-time financial metrics (swaps, fees, positions) and resolved critical UI bugs.
- Participated in hands-on training for smart contract development to bridge the gap between traditional front-end and decentralized applications.

EDUCATION

Hanoi University of Industry (HaUI)

09/2022 – Expected 12/2026

Major: Information Systems

GPA: 3.0/4.0

AWARDS & SCHOLARSHIPS

Samsung Innovation Campus Certificate of Completion - Big Data Course

09/2025

PROJECTS

PropX-Exchange Web3 Real World Asset (RWA) Trading Platform

03/2026 - 06/2026

Github:

- <https://github.com/Quocthait23/rwa-frontend>
- <https://github.com/Quocthait23/PropX-Exchange>
- <https://github.com/Quocthait23/admin-web-rwa>

Role: Full-stack & Smart Contract Developer

Tech Stack: Next.js, NestJS, Solidity, Ethers.js, MySQL, WebSockets

Description & Responsibilities:

- Developed a comprehensive Real World Asset platform focusing on real estate tokenization and secondary market trading.
- Built a scalable 3-module architecture: a user-facing trading frontend, an admin dashboard for asset management, and a robust backend.
- Drafted and deployed secure Smart Contracts (ERC-20, ERC-721) and implemented order-matching logic for asset transactions.
- Optimized system performance to handle high-frequency real-time data updates and interactive chart rendering smoothly.

Edge AI eKYC System

05/2026 - 06/2026

Github : <https://github.com/Quocthai23/ndieu-kyc>

Role: Full-stack & AI Developer

Tech Stack: TypeScript, ONNX Runtime, Web Workers, Node.js.

Description & Responsibilities:

- Engineered an Edge AI-powered eKYC solution utilizing ONNX Runtime to execute complex machine learning models directly within the user's browser, ensuring zero-trust data privacy and reducing server load.
- Offloaded heavy AI inference computations to Web Workers, preventing main-thread blocking and guaranteeing a seamless, high-performance user interface during the identity verification process
- Developed a dedicated CLI automation tool (@ndieu/kyc-cli) to handle the dynamic provisioning and configuration of AI models, drastically reducing integration time for client applications.

Fiat Bridge - Fiat-to-Crypto Gateway

05/2026 - 07/2026

Github : <https://github.com/Quocthai23/fiat-bridge>

Role: Backend Developer

Tech Stack: Go (Golang), Docker, Smart Contracts

Description & Responsibilities:

- Engineered the core bridging logic in Go to synchronize off-chain fiat payments with on-chain token transactions, enabling seamless Fiat-to-Crypto conversions for end-users.
- Designed secure API endpoints to handle user verification and transaction initiation, incorporating necessary validation checks to mitigate fraud and transaction failures.
- Architected a background worker system to continuously monitor blockchain events and automatically reconcile pending user deposits and withdrawals, ensuring strict data consistency across Web2 ledgers and Web3 networks.

SKILLS

- Frontend: HTML/CSS, JavaScript, React.js, Next.js.
- Backend & DB: NestJS, RESTful API, MySQL.
- Web3/Blockchain: Solidity, Hardhat, Ethers.js, Web3.js, Smart Contracts.
- Tools: Git/GitHub.

LANGUAGES

- English: Elementary
- Japanese: Elementary
